

AF36 PRIME

STAYING AHEAD OF AFLATOXIN

AF36 PRIME is an organic, competitive displacement biocontrol for aflatoxin.

Application Reference:

- ✓ 10 lbs. per acre on top soil
- ✓ Use on cotton, corn, pistachios, almonds, & figs,
- ✓ 3 days prior to rain or irrigation
- ✓ Night temperatures above 70 degrees (May - July)

About the Product

When moisture contacts PRIME, spores are grown and spread with wind and insects to competitively displace aflatoxin. Annual, area wide use optimizes the fungal community making AF36 the dominant strain in the soil.
