

AF36 PREVAIL & AF36 PRIME (OMRI) APPLICATION REFERENCE

WHY APPLY?

Aflatoxin is a naturally occurring mycotoxin that puts several commodities at risk. AF36 is a naturally occurring strain of *Aspergillus flavus* that displaces the aflatoxin producing fungi. By applying an AF36 Product (Prevail or Prime-Organic); the association of aflatoxin to your crop is drastically reduced or eliminated. Annual, area wide application allows for the AF36 strain to be the dominant occupant in the soil thereby reducing aflatoxin contamination levels.

APPLICATION INSTRUCTIONS

- ▶▶ Apply on top soil with moisture
- ▶▶ Night time temperatures >70 (late May to early July)
- ▶▶ Apply 10 lbs. per acre on almonds, pistachios, figs
