OASIS

**BETTER YIELDS THROUGH SCIENCE
ISN'T JUST A CATCHY TAG LINE,**

**IT IS WHAT
WE DO!**

Looking to improve your tomato crop this year? Back-to-back annual trials conducted by Fresno State University show ORCAL's PATENTED solar protectants can made a big difference for your tomato crop this year. Four strategic foliar applications of ORCAL's products reduced heat stress and increased tomato yields with an average of 6-8 tons per acre.

What would 6-8 tons mean to your bottom line? When every dollar counts, does the product you are using have a patent and the university data to back up its claims? Ours does! If you want to learn more, contact your PCA, your local distributor or visit ORCALinc.com.

TIMINGS

Apply a 4% solution to transplants prior to planting.

- 1st ground application **1g** in **20g** ride **4 weeks** after planting.
- 2nd ground application **1g** in **20g** ride **7 weeks** after planting.
- 3rd ground application **1g** in **20g** ride **10 weeks** after planting.
- 4th ground application **1g** in **20g** ride **12 weeks** after planting.
